

RE-MANUFACTURED AIRBORNE VACUUM PUMPS

**DON'T THROW AWAY
THOSE AIRBORNE
PUMP CORES!**

- + Rebuilt by FAA approved repair station #C61-51
- + 400 hours warranty or one year in service - same as factory new
- + Yellow tagged-return to service
- + All new carbon parts

MODEL #
211CC, 211CC-9, 212CW
241, 242 Series
441CC Series
442CW Series
442CW-12

PUMP CORES NEEDED

The new RA 215CC/RA216CW replacement pump. FAA-PMA approved to replace Airborne 211CC/212CW and 215CC/216CW.

NEW 441CC SERIES and 442 CW SERIES NOW AVAILABLE

COOLING FINS

Our new pump has cooling fins machined into the cavity providing for more surface area to cool the pump and add life. Our new cavity with advanced coating is proven to provide optimum vacuum and reduce vane wear. Laser precise ports provide unmatched airflow.

BEVELED ROTOR

Placing a bevel on the inlet side of our exclusive rotor at each vane allows small particles to pass without destroying the pump. The angle the vanes exit the rotor are optimized for pump life.

INLET SCREEN

Our exclusive inlet screen, which fits directly in your fitting, will prevent large particles from entering the pump and damaging the carbon. Extensive field and laboratory testing revealed the screen stabilized air inflow providing smoother, more efficient operation.
